

Regional Cross-District Groundwater Management, Restructuring and Consolidation (Booth 12)

(/initiative/4Waw/regional-cross-district-groundwater-management-restructuring-and-consolidation-booth-12)

Create a regional groundwater authority to better coordinate and manage the existing supply options. This regional approach would provide more latitude and flexibility in responding to various localized needs, while eliminating redundant functions among the existing agencies. A centralized management authority would also be better suited to respond to customer demands, climate change, and would likely be more efficient from a costs perspective.
