

## Strategies, Approaches, Guidance Questions - many of the 27 Sections by Jerry Paul (/initiative/4XtB/strategies-approaches-guidance-questions---many-of-the-27-sections-by-jerry-paul)

Key governing principles and information about water sources, by someone who created corporate strategies for a living in engineering-intensive settings. Answers to questions such as: In various places, how much water is there? How can water rights be won? What expert answers do WSAC judges need before they feel they can competently judge the merits of the alternatives? What items are often omitted from cost estimates? What projects can tide us over until water rights come for sustainable, fabulous, low-cost-per-gallon projects? Applies the key question, "What does it take?" Includes approaches to neighbors, science, regulators, energy, scheduling, etc.

Wow!!! Mr. Paul has written a brilliant paper covering a multitude of possibilities and strategies with impressive knowledge and insight. Wish he had been with me on the SC City Water Commission 30 years ago. I'm glad that the WSAC members have had an opportunity to read his submissions, especially his excellent advice to get answers to "Guidance Questions" before narrowing down the options to be pursued.
