

## Three Year Reserve of Water for Fish, Drought Relief and Aquifer Recharge (Booth 25) (/initiative/4Wbb/three-year-reserve-of-water-for-fish-drought-relief-and-aquifer-recharge-booth-25)

**What is the goal?** A three year reserve supply of water for Santa Cruz customers during droughts, water for adequate fish flows, and water for Soquel Creek Water District aquifer recharge. By judicious capture and management of excess San Lorenzo River runoff coupled with adequate storage, we could provide:

A sufficient, sustainable supply of water for Santa Cruz customers during drought periods

A sustainable supply of water providing fish flows that exceed Department of Fish and Wildlife requirements

A sustainable supply of water to help Soquel Creek Water District recharge their aquifers.

PRO

good plan, I like the incremental addition of easiest first on storage, and that may be into the ground with no evaporation issues, etc.
